Policy and Facilities for Alternate Sources of Energy and Energy Conservation Measures

Introduction:

The institute recognises the importance of energy conservation and environmental protection and is committed to implementing measures that promote efficient use of energy and adoption of alternative sources. This policy outlines our commitment to utilize solar energy and LED bulbs as key initiatives for reducing energy consumption and minimizing environmental pollution.

Facilities:

1. Solar Energy:

Our campus is equipped with solar energy plant that harnesses the power of the sun to generate electricity. By installing solar panels, we tap into a renewable and sustainable energy source. The utilization of solar energy offers several benefits like cost savings, environmental protection and contribution to the global shift towards clean energy.

2. Wheeling to the Grid:

We support the practice of wheeling electricity generated from solar energy, to the grid. This has helped us in reduction of the cost factor which is deducted from the bill generated by Electricity department and therefore along with fulfilling our responsibility towards environment we are also benefitting financially.

3. LED Bulbs:

To enhance energy efficiency, we are using LED bulbs in various areas of our institution. LED bulbs are highly efficient lighting options that consume significantly less energy compared to traditional incandescent or fluorescent bulbs. Their long lifespan and durability contribute to both energy and cost savings.
